

# PLG: Learning and Evaluation

# Blueprint: Who we are

Founded on a simple idea that **evidence is a powerful tool for change**

- We help decision-makers use evidence to solve complex challenges and **improve outcomes** for people in Canada
- 45 employees with **diverse capabilities** in policy research, design, data analytics, evaluation, implementation, and knowledge mobilization

# Comfort with Evaluation

Please visit the Mentimeter and answer the following question:

On a scale from 1 to 10 where 1 is not at all comfortable and 10 is extremely comfortable, what would you rate your comfort level with evaluation?

M Y T H S

Myth 1: I am not an evaluator, I can't do “evaluation-y” things.

**Myth 1: I am not an evaluator, I can't do "evaluation-y" things.**

**Many of the skills needed to be an effective evaluator you use daily.**

**Critical Thinking**

**Communication**

**Project Management**

**Interpersonal Skills**

**Analytics Skills**

**Adaptability**

A critical component to any evaluation is being able to ask "why".

Myth 2: Evaluation  
only looks at  
outcomes.

# Myth 2: Evaluations only look at outcomes.

While outcomes are important, it can be only one aspect of an evaluation.

Relevance	Coherence	Effectiveness	Efficiency	Impact	Sustainability
					
Is the intervention doing the right things?	How well does the intervention fit?	Is the intervention achieving its objectives?	How well are resources used?	What difference is the intervention making?	Will the benefits last long term?

Myth 3: Evaluations only  
occur at the end of the  
project.

**Myth 3:**  
**Evaluations**  
**only occur at**  
**the end of the**  
**project.**

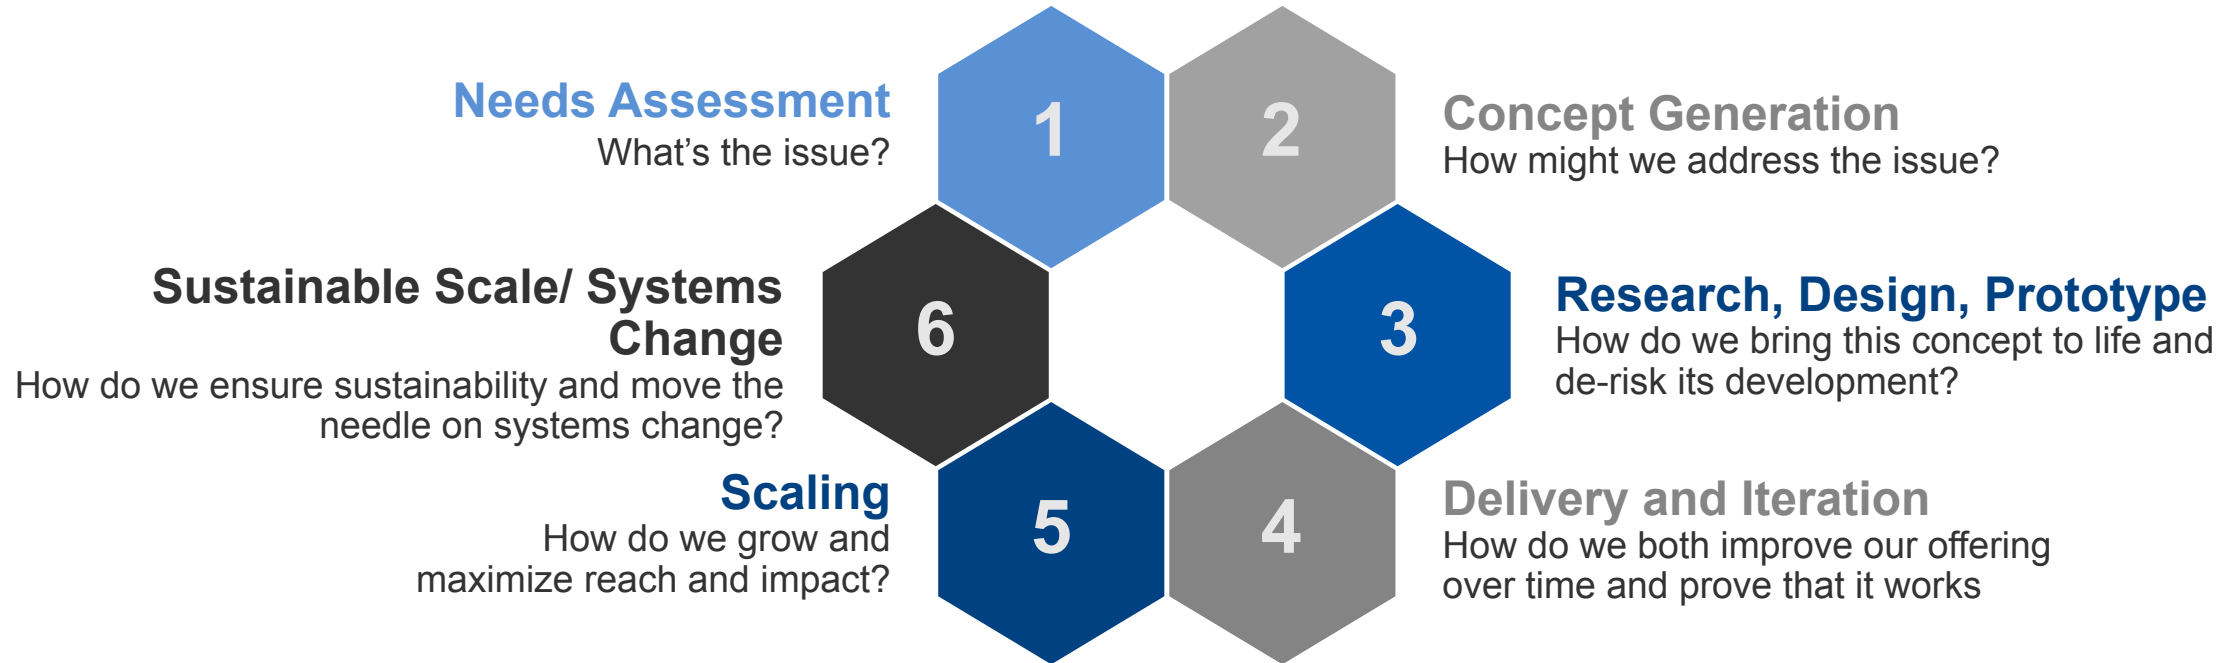

**Evaluation, or more broadly evidence generation, should occur at every stage of your project.**

- **Evaluation:** is the process of assessing merit of something
- **Evidence Generation:** is the process of creating data to support a claim.

# Blueprint's Evidence Framework

Myth 4: If I can't do an impact evaluation, there is no point of doing an evaluation.

**Myth 4: If I can't do an impact evaluation, there is no point of doing an evaluation.**

**While beneficial at the right time and place, impact evaluations are not everything.**

- Stanford Social Innovation Review highlights that our over reliance on impact evaluation leads to **ineffective use of time and money** – which often leads to **inflated results**.
- You should look to do impact evaluations if: you have a clear testable hypothesis, the project is stable and been delivered for some time, you have sufficient resources including funding, and you see value in this work.
- This website has lots of great tools to help you assess whether you are ready for an impact evaluation and what to consider.

**Just because it is not causal, it doesn't mean it isn't worth knowing.**

We need to create a culture where data is something we regularly collect, analyze and use to improve programming.

Myth 5: There are no  
helpful resources for me.

**Myth 5: There are no helpful resources for me.**

**It can be overwhelming with the number of resources out there. Here are some of my favourites:**

- **Project Evidence: A Beginner's Guide to Evidence Building**
- **Better Evaluation: Manager's Guide to Evaluation**
- **Knowledge Institute on Child and Youth Mental Health and Addictions: A program Evaluation Toolkit**
